

# C19: PROTECT

ZOONO®

## TFL CASE STUDY - The London Underground has undergone an enhanced clean using Zoono-71 to help guard against the spread of Covid-19.

Transport for London conducted a trial of Zoono® Z-71 by applying the product to 20 touch points around an underground tube station. They swabbed those touch points and a further 20 which were not treated to validate that the surface was pathogen free at the commencement of the trial.

They returned 25 days later to re-test the touchpoints – all the Zoono® treated touchpoints remained 100% pathogen free whereas the untreated touchpoints showed that 55% of them now contained pathogens. (full case study and others available).

**Proven by over 100 independent laboratories**
